

Lab: Stored Procedures

Estimated time needed: 10 minutes

In this lab, you will create and execute stored procedures on IBM DB2 using SQL. A stored procedure is a set of SQL statements that are stored and executed on the database server. So instead of sending multiple SQL statements from the client to the server, you encapsulate them in a stored procedure on the server and send one statement from the client to execute them. Also, stored procedures can be useful if you have an SQL query that you write over and over again. You can save it as a stored procedure, and then just call it to execute it. In stored procedures, you can alter your permissions so that a stored procedure can act based on the passed parameter values.

Software Used in this Lab

In this lab, you will use an IBM DB2 Database. DB2 is a Relational Database Management System (RDBMS) from IBM, designed to store, analyze and retrieve data efficiently.

To complete this lab you will utilize a DB2 Analytics service on IBM Cloud. If you did not already complete this lab task earlier in this module, you will not yet have access to DB2 on IBM Cloud, and you will need to follow the lab below first:

- [Link to Lab: Sign up for IBM Cloud, Create DB2 service instance and Get started with the DB2 console](#)

Data Used in this Lab

The data used in this lab is internal data. You will be working on the PETSALE table.

ID	ANIMAL	SALEPRICE	SALEDATE	QUANTITY
1	Cat	450.09	2018-05-29	9
2	Dog	666.66	2018-06-01	3
3	Parrot	50.00	2018-06-04	2
4	Hamster	60.60	2018-06-11	6
5	Goldfish	48.48	2018-06-14	24

This lab requires you to have the PETSALE table populated with sample data on DB2. You might have created and populated a PETSALE table in a previous lab. But for this lab, it is recommended you download the PETSAL-CREATE.sql script below, upload it to DB2 console and run it. The script will create a new PETSALE table dropping any previous PETSALE table if exists, and will populate it with the required sample data.

- [PETSAL-CREATE.sql](#)

Please go through the lab below to learn how to upload and run a script on DB2 console (for this case, you need don't need to know anything else other than how to upload and run a script)

- [Link to Lab: Create table using SQL script and Load data into table](#)

Objectives

After completing this lab, you will be able to:

- Create stored procedures
- Execute stored procedures

Instructions

When you approach the exercises in this lab, follow the instructions to run the queries on DB2.

- Go to the [Getting a Lab of IBM Cloud](#) by logging in where you can find the DB2 service instance that you created in a previous lab under Services section. Click on the DB2-xx service. Next, open the DB2 Console by clicking on Open Console button. Click on the 3-hour menu item in the top left corner and go to the Run SQL page. The Run SQL tool enables you to run SQL statements.
 - If needed, follow [Link to Lab: Sign up for IBM Cloud, Create DB2 service instance and Get started with the DB2 console](#)

Exercise 1

In this exercise, you will create and execute a stored procedure to read data from a table on DB2 using SQL.

1. Make sure you have created and populated the PETSALE table following the steps in the "Data Used in this Lab" section of this lab.

ID	ANIMAL	SALEPRICE	SALEDATE	QUANTITY
1	Cat	450.09	2018-05-29	9
2	Dog	666.66	2018-06-01	3
3	Parrot	50.00	2018-06-04	2
4	Hamster	60.60	2018-06-11	6
5	Goldfish	48.48	2018-06-14	24

2.
 - You will create a stored procedure routine named RETRIEVE_ALL.
 - The RETRIEVE_ALL routine will create an SQL query to retrieve all the records from the PETSALE table, as you don't need to write the same query over and over again. You just call the stored procedure routine to execute the query everytime.
 - To create the stored procedure routine, copy the code below and paste it to the text area of the Run SQL page. Click Run all.

```
--SET TERMINATOR @
CREATE PROCEDURE RETRIEVE_ALL
LANGUAGE SQL
MODIF NOYES 1
BEGIN
    DECLARE C1 CURSOR
    WITH RETURN FOR
    SELECT * FROM PETSAL;
    OPEN C1;
END
@
```

3. To call the RETRIEVE_ALL routine, copy the code below in a new blank script and paste it to the text area of the Run SQL page. Click Run all. You will have all the records retrieved from the PETSAL table.

```
CALL RETRIEVE_ALL;
-- Caller query
```

```
1 CALL RETRIEVE_ALL;
2
3
```

4. You can view the created stored procedure routine RETRIEVE_ALL. Click on the 3-hour menu item in the top left corner and click **EXPLORE > APPLICATION OBJECTS > Stored Procedures**. Find the procedure routine RETRIEVE_ALL from Procedures by clicking Select All. Click on the procedure routine RETRIEVE_ALL.

5. If you wish to drop the stored procedure routine `RETRIEVE_ALL`, copy the code below and paste it to the textbox of the **Run SQL** page. Click **Run all**.

Exercise 2

1. Make sure you have created and populated the **PETSALE** table following the steps in the “Data Used in this Lab” section of this lab.

• You will create a stored procedure routine named **UPDATE_SALEPRICE** with parameters **Animal_ID** and **Animal_Health**.

• The **UPDATE_SALEPRICE** routine will contain **SQL** queries to update the sale price of the animals in the **PETSALL** table depending on their health conditions, **BAD** or **WORSE**.

• This procedure routine will take **Animal_ID** and **Health** conditions as parameters which will be used to update the sale price of animal in the **PETSALL** table by an amount depending on their health condition. Suppose if an animal with ID having **BAD** health condition, the sale price will be reduced further by 25%.

• For animal with ID **WY** having **WORSE** health condition, the sale price will be reduced further by 50%.

• You will create a table **ZZ** having two columns and store the results of the **Run SQL** query.

• To create the stored procedure routine, copy the code below and paste it to the text box of the **Run SQL** page. Click **Run all**.

[illegible]

3. Let's call the UPDATE_SALEPRICE routine. We want to update the sale price of animal with ID 1 having **BAD** health condition in the PETSALE table. Copy the code below in a **new blank script** and paste it to the textbox of the **Run SQL** pane. Click **Run all**. You will have all the records retrieved from the PETSALE table.

```
CALL RSTRIVE_ALL;
CALL UPDATE_SALESPRICE(1, 'BAD');      -- Caller query
CALL RSTRIVE_ALL;
```

1CALL RETRIEVE_ALL;
2CALL UPDATE_SALEPRICE(1, 'BAD');
3CALL RETRIEVE_ALL;
4
5
6

Run allRemember my last behavior

Result - Dec 17, 2020 9:...

CALL RETRIEVE_ALL

Run time: 0.027 s

Result set 1

ID	ANIMAL	SALEPRICE	SALEDATE	QUANTITY
1	Cat	450.09	2018-05-29	9
2	Dog	666.66	2018-06-01	3
3	Parrot	50.00	2018-06-04	2
4	Hamster	60.60	2018-06-11	6
5	Goldfish	48.48	2018-06-14	24

CALL UPDATE_SALEPRICE(1, 'BAD')

Run time: 0.017 s

Status: Success | Affected Rows: 0

CALL RETRIEVE_ALL

Run time: 0.007 s

Result set 1

ID	ANIMAL	SALEPRICE	SALEDATE	QUANTITY
1	Cat	337.56	2018-05-29	9
2	Dog	666.66	2018-06-01	3
3	Parrot	50.00	2018-06-04	2
4	Hamster	60.60	2018-06-11	6
5	Goldfish	48.48	2018-06-14	24

4. Let's call the UPDATE_SALEPRICE routine once again. We want to update the sale price of animal with ID 3 having WORSE health condition in the PETSALE table. Copy the code below and paste it to the text box of the Run SQL page. Click Run all. You will have all the records retrieved from the PETSALE table.

1CALL RETRIEVE_ALL;
2CALL UPDATE_SALEPRICE(3, 'WORSE');
3CALL RETRIEVE_ALL;
4
5
6

Run allRemember my last behavior

Result - Dec 17, 2020 9:...

CALL RETRIEVE_ALL

Run time: 0.020 s

Result set 1

ID	ANIMAL	SALEPRICE	SALEDATE	QUANTITY
1	Cat	337.56	2018-05-29	9
2	Dog	666.66	2018-06-01	3
3	Parrot	50.00	2018-06-04	2
4	Hamster	60.60	2018-06-11	6
5	Goldfish	48.48	2018-06-14	24

CALL UPDATE_SALEPRICE(3, 'WORSE')

Run time: 0.018 s

Status: Success | Affected Rows: 0

CALL RETRIEVE_ALL

Run time: 0.008 s

Result set 1

ID	ANIMAL	SALEPRICE	SALEDATE	QUANTITY
1	Cat	337.56	2018-05-29	9
2	Dog	666.66	2018-06-01	3
3	Parrot	25.00	2018-06-04	2
4	Hamster	60.60	2018-06-11	6
5	Goldfish	48.48	2018-06-14	24

5. You can view the created stored procedure routine UPDATE_SALEPRICE. Click on the 3-bars menu icon in the top left corner and click EXPLORE > APPLICATION OBJECTS > Stored Procedures. Find the procedure routine UPDATE_SALEPRICE from Procedures by clicking Select All. Click on the procedure routine UPDATE_SALEPRICE.
